Syllabus: GEOG788G - Advanced Remote Sensing using Lidar - Winter 2014

Instructor
Dr. Jonathan P. Resop (resop@umd.edu)
Office Hours: On-campus: Wednesdays 3 to 5 pm
Location: 1111 LeFrak Hall
Teaching Assistant
<TBA>
Office Hours: <TBA>
About the Course
Time: 5:30 to 8 pm Mondays (Lectures); 5:30 to 7 pm Tuesdays (Lab Sessions)
Location: Online: http://elms.umd.edu; Campus Location: <TBA> LeFrak Hall

Description
This course will expand on remote sensing concepts with a focus on light detection and ranging (lidar) technology. Lidar, also known as laser scanning, is an active remote sensing tool that can produce high-resolution point clouds. It is widely used today in many different fields, ranging from surveying to forestry. Lidar is being applied to problems such as terrain modeling, biomass estimation, change detection, feature extraction, and measuring tree canopy. This course will cover the fundamentals of lidar, explore current developments in lidar technology, and discuss different applications where lidar is being used. Students will get hands-on learning about lidar data management, processing, and analysis.

The format of this course will consist of lectures, lab assignments, readings, and a final project. The lectures will be presented online via the Live Classroom on the Enterprise Learning Management System (ELMS). All lectures involve the interaction between students and instructor in real-time. Lectures will be archived into videos which will be made available on ELMS. Please note that video archives are only intended for occasional or backup use in case students have to miss lectures due to personal, business, or medical reasons. Real-time, online participation is strongly recommended. The reading and lab assignments will also be posted on ELMS.

Prerequisites
Students should be proficient in GIS and have taken at least an introductory course in remote sensing (GEOG652: Digital Image Processing and Analysis). Additionally, students should have a background in programming using Python (GEOG656: Programming and Scripting for GIS).

Textbooks
The following is a list of useful resources involving lidar data:
1. The USGS Center for LIDAR Information Coordination and Knowledge (CLICK) - http://lidar.cr.usgs.gov/
2. Young, J. 2011. Lidar for Dummies. Free download available at - http://www.dlt.com/library/whitepaper/lidar-for-dummies-ebook
3. Renslow, M. 2013. Manual of Airborne Topographic Lidar.
4. Heritage, G. and A. Large. 2009. Laser Scanning for the Environmental Sciences.
5. Shan, J. and C. K. Toth. 2008. Topographic Laser Ranging and Scanning.

Lab Assignments
There are a total of seven (7) lab assignments and each account for 10% of the final grade. The due date will be specified in the lab document. Late submission of lab reports may result in a deduction of points. However, in some situations (e.g. medical or family emergency), extension is possible if you contact the instructor before the due date. All labs must be completed by the end of the quarter.

Final Project
A final project is required to complete this course. It will provide students an opportunity to work on a small project involving lidar that is closely related to their area of study. The project must be carried out individually and independently. The project will consist of a (1) proposal, (2) poster, and (3) presentation.

Example Projects:
-Application of lidar data to a particular problem or system
-Using lidar data as input for a particular model
-Processing lidar data to produce a particular output
-Comparing lidar data to other remotely sensed data

Grading
The distributions of grade are:
Lab Assignments = 70%
Final Project = 20% (Proposal = 5% and Poster / Presentation = 15%)
Participation and Discussion = 5%
Weekly Quizzes = 5% (The lowest quiz grade will be dropped)
The plus/minus grading system will be used to assign student grades. Minor adjustments to this scale might be made based on the performance of the class as a whole.

Software
You can use either a PC or Mac to access ELMS. Whichever you choose, it should be equipped with headphones and microphone. You should also have the following plug-ins installed: Java, Real Media, Flash Player, and Quicktime.

The following software will be utilized during this course:
- ESRI ArcGIS 10.X
- Python 2.7
- Open-source Software such as LAStools, GRASS, FUSION, etc...

The software required for this class is ESRI ArcGIS 10.X (ArcInfo) which is available in the open lab (located in 1136 and 1138 LeFrak Hall). If you need a personal copy of ArcGIS for your computer, please contact me by e-mail before class. Note: The free software that comes in books and other venues does not have the ArcInfo license and cannot be used to complete most labs.

Communication
Email
Both the TA and the instructor will always be available by email. Use the email link in the sidebar to send us an email at any time. We will try to answer within 24 hours and usually sooner.

Offline and Online Office Hours
I will be available to meet on campus for face-to-face office hours at specified times. You can also email either the TA or the instructor to set up individual office hours by appointment.

If needed, I can provide online office hours if you are unable to meet on campus. To do so, simply send me an e-mail to request a time to meet online.

Discussion Board
The discussion board is a place on the ELMS site for you to visit your classmates. This is an open forum for discussion about course material and for casual conversation. We encourage any general questions about the course material or lab assignments to be posted here so that students can help learn from each other. We will try to help answer any course-related questions that are posted here. In addition, there will be study rooms set up for you to form study groups. We will not be monitoring these rooms. Remember that the University Code of Academic Integrity specifies that you are free to work together and to discuss the assignments, but that you must produce your own original and independent work.

Class Attendance and Environment
You are strongly recommended to attend every lecture in real time at the online site. We will meet online at the announced time for a live audio/video lecture. During this time you can follow along with the lecture and ask any questions that you may have. The lecture will be archived for anyone who absolutely must miss a class, but I encourage you to join the class online at the appointed time so that you can ask questions and keep up with the course schedule.

In this class, students will meet in a virtual space online which will be treated as a classroom. Our class will meet within the Enterprise Learning Management System (ELMS), the university's online learning system. Go to http://elms.umd.edu to access the course. After login, the course will be listed in the right column under "My Courses".

It is important to recognize that the classroom is an environment that requires respect for all participants. Therefore, students are expected to conduct themselves in a considerate manner.

Disabilities and Religion
Any student with a disability is encouraged to meet with the instructor privately during the first week of class to discuss accommodations. I will make every effort to accommodate students who are registered with the Disability Support Services (DSS) Office and provide a DSS accommodation form.

Please refer to the Online Undergraduate Catalog Policy on Religious Observance.

Academic Integrity
The University of Maryland, College Park has a nationally recognized Code of Academic Integrity, administered by the Student Honor Council. This Code sets the standards for academic integrity at Maryland for all undergraduate and graduate students. As a student, you are responsible for upholding these standards for this course. It is very important for you to be aware of the consequences of cheating, fabrication, facilitation, and plagiarism. For more information on the Code of Academic Integrity or the Student Honor Council, please visit http://www.shc.umd.edu.

Within our class, students may work together to review class notes and lab assignments. However, labs must be done individually. Students must turn in their own work without assistance from another student.

Course Schedule
This is a tentative schedule and may be adjusted. Changes will be announced and posted on Blackboard.

Week	Date	Lecture Topics	Readings	Assignments
1	Dec. 1	Introduction to Lidar Lidar Data Formats	(Wehr, 1999) (Young, 2011)	Lab 1 Out
2	Dec. 8	Lidar Data Collection Lidar Data Preprocessing ArcGIS Tools and LAStools	(Wandinger, 2005) (Stoker, 2006) (Crawford, 2013)	Lab 1 Due Lab 2 Out
3	Dec. 15	Digital Elevation Models Digital Terrain Models Digital Surface Models	(Kraus, 2001) (Reutebuch, 2003) (Brovelli, 2001)	Lab 2 Due Lab 3 Out Proposal Out
	Dec. 22	Winter Break		
	Dec. 29	Winter Break		
4	Jan. 5	Alternatives to Aerial Atmospheric Lidar Lidar Data Fusion	(Henning, 2006) (Brooks, 2013) (Abdalati, 2010)	Lab 3 Due
5	Jan. 12	Lidar Accuracy Change Detection Case Study: Landslides / Erosion	(Hodgson, 2004) (Chen, 2006) (Resop, 2010)	Proposal Due Lab 4 Out
6	Jan. 19	Lidar Classification Feature Extraction Case Study: Trees / Rocks	(Popescu, 2003) (Resop, 2012)	Lab 4 Due Lab 5 Out
7	Jan. 26	Ecological Applications Hydrological Applications GRASS Lidar Tools	(Mundt, 2006) (Turner, 2004)	Lab 5 Due Lab 6 Out
8	Feb. 2	Forestry Applications Urban Applications FUSION Lidar Tools	(Lim, 2003) (Priestnall, 2000)	Lab 6 Due Lab 7 Out
9	Feb. 9	Profiling Lidar Full Waveform Lidar	(Nelson, 2012) (Mallet, 2009)	Lab 7 Due
10	Feb. 16	Final Project Presentations Multi Spectral Lidar Photon Counting Lidar		Project due *

** Presentations will be during the last lecture of class. Final Projects will be due before **Feb. 20**.*
